

# THE 'ASSURANCE' OF PROVEN EXPERTISE

## WITH MAVERIC'S TEST PROCESS CONSULTING SERVICES

At Maveric, we provide a complete portfolio of consulting services focused on enhancing your test capabilities, based on years of proven expertise in independent software testing for banks and financial institutions.

### MAVERIC'S TEST PROCESS CONSULTING SERVICES

#### Process Assessment

Maveric's Process Assessment offering includes focus areas described in TMMI, TPI and CMMI models. The assessment is carried out onsite by a team of experienced consultants who:

- ▶ Review existing process documentation and current practices
- ▶ Interview the main stakeholders
- ▶ Collate and analyze the information gathered
- ▶ Document and present the assessment findings and prioritized recommendations

#### Process Definition

Maveric's Process Definition involves a thorough study by our consultants of the processes and their implementations to understand the strengths and limitations of the customer's testing framework.

Activities include creating a gap analysis report, generating a test process framework, conducting a process workshop and training. Our consultants will also launch the new testing process into a live scenario as a prototype.

#### Test Environment Design

Maveric's Test Environment Design involves a study of the current test environment setup and application test requirements. We then design a comprehensive test environment addressing the required testing activities to be performed. Our team of senior consultants work onsite to study the current application and test environment. They then design the test environment, prepare a roadmap for the recycling / purchase of equipment and define test environment management practices.

## Tool Selection

Maveric's Tool Selection provides a comparative analysis of the tools available in the market and assists the customer in procuring the appropriate tool, configuring and implementing it correctly. Maveric's consultants can run a proof of concept using the shortlisted tool across an organization, a single department or just a single project.

## Test Compliance

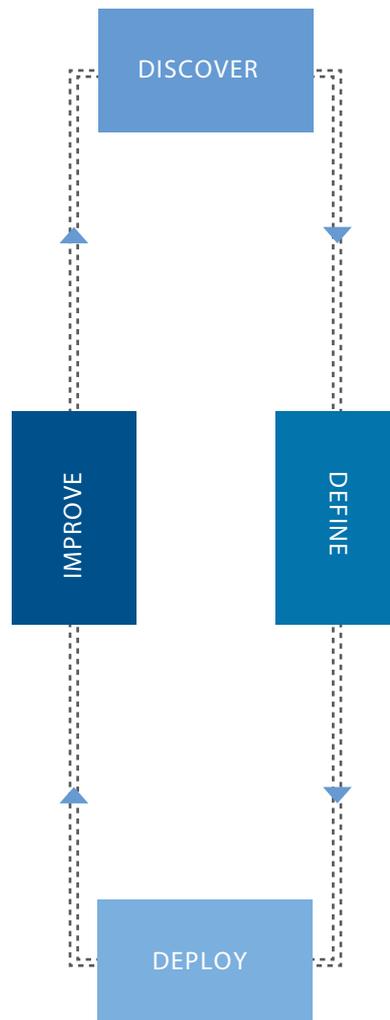

Maveric's Test Compliance offering is designed to ensure that test improvements implemented are institutionalized and optimized and that improvements are measured to determine ROI. Maveric's consultants create an audit program and also assist the customer in identifying appropriate corrective and preventive action for non-compliances / unsatisfactory ROI.

## MAVERIC'S CONSULTING METHODOLOGY

Maveric's D3I Methodology provides customers an integrated framework for test capability enhancement in order to

optimize effort and cost for higher ROI.

## OUR D3 I APPROACH

### Discover

In this phase, we do a thorough assessment of the customer's test

organization to gain an understanding of existing practices, and identify opportunities for improvement.

### Define

We work with key stakeholders to define the test policy, strategy and process framework based on the key improvement areas identified. Test organization, infrastructure and processes are established in this phase.

### Deploy

The enhanced test process framework that is developed is deployed across the identified organizational units (identified projects / departments) and the required training and support is provided to ensure institutionalization of the framework.

### Improve

Extensive in-process and independent audits are conducted, process and product metrics are analyzed. These form the basis for corrective and preventive actions as necessary.

### ABOUT MAVERIC
