

Banks and financial institutions face constant staffing challenges across multiple stages of any Technology adoption initiative. Be it unexpected technology implementations necessitated by dynamic market landscape or the aftermath of a strategic transformation exercise, availability of right skillsets to manage the expectations can be tough.

Challenges are obvious during the project approval and initiation stage or even during the course of Business As Usual (BAU) upgrades and maintenance. Banks constantly encounter multiple issues like

- Shortage of niche skills in IT operations
- Pressure of implementing business, technology or regulatory changes
- Frequent upgrades / patches from product vendors of core & surround systems
- Skill gaps accumulated over a period of time leading to inefficiencies
- Low productivity causing schedule slippages and cost escalations
- Deployment of part-time business users in testing/assurance roles
- Testing and quality functions being sidelined within the IT function

- A root cause analysis reveals that most of these issues are due to
- Insufficient funding
 - Reduced time-to-market
 - Incomplete or gaps in requirements
 - Inadequate test processes, coverage and methods
 - Deficient release / configuration management
 - Pressure built due to high number of production defects

Maveric's **Team-In-A-Box** brings together the right mix of complementary skills to help you manage your complex assurance initiatives. By bringing together multi skilled, experienced professionals across wide range of domains and technologies, we help you drive success across your strategic assurance programs. Our Team-In-A-Box encompasses skills including core banking, change management, IT risk, functional and technical skills, to name a few. Each member will possess multiple complementary skills that allows you to choose unique skill combination based on your exact business requirement.

How it works?

The salient feature of our offering is the ability to choose the right mix of assurance skills that suit your exact requirement. The process of identification of appropriate competencies include the following five key steps:

1. Assessment: A comprehensive, short, joint SMART Assessment aimed at understanding your assurance requirement
2. Issue identification: Outcome of the assessment exercise enabling identification of the top 3 issues driving your objectives
3. Skill exploration: Identify the major skills required to fix the gaps outlined during the assessment exercise. This is further used to look into the skillset repository of Team-In-A-Box to shortlist possible combinations
4. Skill mapping: Finalize the right skill combination for the requirement and use for team formation
5. On-boarding: Bring in required team members on-site or ramp up off-shore.

Key Benefits

- Participative Assessment leading to joint identification of issues and skills required
- Availability of experienced team members who bring the right competency to any assurance engagement
- Multi-skilled team leading to optimized team size – the best fit for your requirements
- We also bring to bear our many years of experience in IT Market with our specialised processes and methodologies
- We have delivered hundreds of teams to various clients globally, in multiple delivery models
- Our experience in implementing over 50 transformation / upgrade / greenfield testing engagements will ensure success of your assurance initiatives
